Professional Summary

A motivated and recent B.E. Computer Science and Engineering graduate from Government College of Technology, Coimbatore, seeking an entry-level opportunity in a technology-driven organization. Possessing a strong foundation in programming, database management, and problem-solving, with a keen interest in applying technical knowledge to real-world challenges. Eager to continuously learn new technologies, enhance technical and analytical skills, and contribute effectively to organizational growth through dedication, teamwork, and innovative thinking.

projects

RFID-Based Library Management System

- Developed an automated library system using RFID technology for book issue and return.
- Implemented RFID-based user authentication and inventory tracking.
- Designed database models for books, users, transactions, and RFID tags.
- Improved library efficiency through faster transactions and real-time record updates.

AI-Powered Diabetes Prediction and Natural Health Recommendation System

- Developed a machine learning model to predict diabetes risk using the PIMA Indians Diabetes Dataset.
- Processed health parameters such as glucose level, BMI, age, insulin, and blood pressure using Python (Pandas, NumPy).
- Provided natural food and lifestyle recommendations to help manage diabetes.
- Deployed the system using Flask for real-time prediction through a web interface.
